

LastMinuteKE — Go-Live Checklist

From empty Supabase project to a live, deployed platform. Tick each box as you go.

Supabase account:
vombonya@gmail.com

1 Create the project

SUPABASE.COM

- ☐ Sign in as vombonya@gmail.com → New project.
- ☐ Name it, set a strong DB password (save it), region EU/Frankfurt.
- ☐ Click **Create** and wait ~2 min.

2 Copy your keys

SETTINGS → API

- ☐ Gear icon → **Project Settings** → **API**.
- ☐ Copy the **Project URL** and **anon / public** key.
- ☐ **Never copy or use the service_role key in the app.**

3 Build the database

SQL EDITOR

- ☐ **SQL Editor** → **New query**, paste 0001_schema.sql, Run.
- ☐ New query → 0002_rls.sql → Run (the security layer).
- ☐ New query → 0003_seed_network.sql → Run (10 providers, 3 assessors).

4 Logins & make yourself admin

AUTHENTICATION

- ☐ **Authentication** → **Users** → **Add user** (your email + password).
- ☐ Open the user, copy its **User UID**.
- ☐ SQL Editor → run update public.profiles set role='admin' where id='YOUR-UID';

5 Deploy the alert function

EDGE FUNCTIONS

- ☐ **Edge Functions** → **Deploy a new function** → **Via Editor**.
- ☐ Name it exactly dispatch-alerts.
- ☐ Paste all of functions/dispatch-alerts/index.ts → **Deploy**.

6 Add alert secrets

YOUR CHANNEL CHOICE

- ☐ **Edge Functions** → **Secrets** → **Add secret**.
- ☐ Start with one channel, e.g. SMS: AT_USERNAME, AT_API_KEY.
- ☐ Later: WhatsApp WHATSAPP_TOKEN / WHATSAPP_PHONE_ID, email RESEND_API_KEY.
- ☐ Skipped channels just don't send — no crash.

7 Connect the app

YOUR CODE

- ☐ Copy .env.example → .env; fill VITE_SUPABASE_URL + VITE_SUPABASE_ANON_KEY.
- ☐ **DONE** store.js is already wired for live mode — no code edit needed.
- ☐ Swap the demo role switcher in App.jsx for the signed-in user (later).

8 Put it online

VERCEL.COM

- ☐ **Add New** → **Project**, import the lastminutekenya repo.
- ☐ Add the same 2 env vars (VITE_SUPABASE_URL, VITE_SUPABASE_ANON_KEY).
- ☐ **Deploy**, then add domain lastminutekenya.com under Settings → Domains.

9 Safety checks before real users

DO NOT SKIP

- ☐ Only the **anon** key is in the app / Vercel — never service_role.
- ☐ Every table shows **RLS enabled** (Authentication → Policies).
- ☐ Cloudflare **Turnstile** added to the public "Get Help" forms.
- ☐ Real provider phone numbers + consent before any channel goes live.
- ☐ HTTPS enforced on the Vercel domain (default).
- ☐ Privacy Policy live with DPA-2019 controller details.

Flow: ● Red / ● Amber / ● Green scorecard → alerts warm the network → rescue.
